

Fused Lighter Socket

A separately fused lighter socket is now available for use with radar and laser guns as well as general appliances. The socket is a special cigarette lighter socket with waterproof spring-loaded cover and sealed wire inputs.

Socket is equipped with a quick disconnect for easy fairing panel removal for routine maintenance. Socket is secured to the plastic panel with stainless steel bolts mounted to a laser-cut aluminum backing plate.

The same socket is available in a kit for installation in the rear radio compartment, specifically for use with moving radar, where agencies don't wish to modify the molded cord / plug supplied with the moving radar counter unit.
